

(a) period enclosures of the 73 pieces of $[0, 1/64]$

(b) detail of (a) near $\varepsilon = 0$

(c) radii of the pieces

- piece P : $\varepsilon \in P$, $T(\varepsilon)$ in its enclosure (Theorem C)
- ◆ T_N , $N = 8, 16, 32, 64$ (Theorem B; width $< 2 \times 10^{-25}$ ms)
- T_∞ of the cable, $\varepsilon = 0$ (Theorem C(c))

- $r_{\text{ex}}(P)$
- $r_{\text{un}}(P)$
- left side of the gluing inequality
